

## Picture Frame Layout

In order to create this project, you will be given a piece of wood that is roughly 32" long by 5 1/4" wide by 1/2" thick.

You will need to cut the pieces for your picture frame out of this. However you must carefully draw out your cuts on your wood before you are allowed to make the cuts. Measure very carefully and mark accurately with a ruler.

Remember - Measure twice, cut once. You will not be getting more wood. If you make a mistake, you must think about how to repair it yourself.

Once your work is laid out, show it to your teacher to check it and get permission to begin.
